

# SANDVIK SG & SG-H GRIZZLY SCREENS

FECHNICAL SPECIFICATION

The SG Grizzly Screens are robust linear-motion screens designed for heavy-duty scalping. The main purpose of scalper screen is to remove fines from the feed before primary crushing. SG screens are suitable for mining and construction applications. Grizzly screen immediately after a primary feeder gives more effective scalping than a primary feeder with a built-in grizzly. The stroke and speed remain constant while the feed rate is adjusted by varying the feeder speed, providing always an efficient separation. SG screens are often combined with a reciprocating plate feeder when heavy dump loads and high capacity is required, in conjunction with a by-pass of the fines ahead of the crusher.

SG screens (excluding SG2452X) have their vibrating mechanism mounted under the feeder body as standard. The double shaft mechanism generates a linear stroke, which consequently means a better feeding as well as a sustained material speed on the screen. The SG screens are available with 2, 3 and 4 grizzly steps for the single deck models, depending on the size of the screen. The double deck models are equipped with grizzlies on the top deck and STM screening deck as a bottom deck (not for fines and classification screening).

The drive unit incorporates two motors with cardan shafts (self-synchronizing mechanism, no gear wheels). The double shaft mechanism makes the installation slope of 5 degrees enough in most cases. Hence, the SG screens require considerably low headroom, which implies a significant advantage in some applications.

Alongside with SG product family, Sandvik is offering circular motion scalper screens, SG-H series, in case of complete plant deliveries. The SG-H screens are designed for installation after a primary feeder and before a primary crusher in construction duty applications. The feed will typically be blasted rock, ripped rock or gravel with a high fines content, often containing some difficult wet natural fines or clay. The SG-H range of screens has a single grizzly or plate type scalping deck with the option of a second deck with woven wire.

#### FEATURES

Double shaft mechanism generates a linear stroke that gives better performance

Versatile adjustment possibilities enable best achievable scalping performance

Large separation range available with one or two deck construction

High acceleration keeps the grizzly section clean

Low headroom requirement gives an advantage for lay-out designing

# SG GRIZZLY SCREENS

# STANDARD DELIVERY INCLUDES

- Screen body and vibrating mechanism bolted together
- Drive unit including electric motors, motor bases and power transmission components
- Support coil springs
- Spring seats (i.e. top and bottom parts)
- Grizzly bars
- AR400 steel wear liners for pan and sides
- SG2452X -model: 50 mm replaceable wear rubber on feed tray and 6 mm rubber protection (glued) on cross beams on the second deck
- Buffers to restrict excess lateral movement
- Screen media side clamps and center clamps when side tensioned media is applicable (all clamps are made of steel) and steel wire media
- Surface treatment according to Sandvik standard
- Installation, operating and maintenance manuals

#### **OPTIONS**

- Screening media for bottom deck: side tensioned rubber
- Upgraded mechanism
- AR500 steel liners for pan and sides
- Tool kit for mechanism bearing change
- Special grizzly bars for slag handling
- Special surface treatment for corrosive atmosphere (special paint)
- Special components (motors etc.) for special circumstances (temperature, altitude, tropical etc.)
- Preparation (in the factory before dispatch) for a long period storage

### NOMINAL OPERATION LIMITS

- Maximum drop height: 750 mm
- Inclination range: 5–12 degrees (std. 5 deg.)
- Separation range: 60-250 mm
- Speed range: 700–980 rpm
- Stroke range: 5–16 mm
- Acceleration: up to 5 x G

2

#### GENERAL TECHNICAL DATA

- Stroke angle: 40-55 degrees
- Standard inclination: 5 degrees (for SG2452X 12 deg.)
- Motors according to IEC standard, enclosure class IP55, frame B3, speed 750/1000/1500 rpm (depends on the size of the screen)
- Drive through cardan shaft, one motor for each shaft, no gears
- Spherical roller bearings
- Oil bath lubrication
- Buffers to restrict excess lateral movement included
- Dual shaft mechanism is fixed with pre-tensioned bolts
- Mechanism is equipped with oil level gauge and breather
- Wear liners: AR400 steel
- Welded frame including heavy steel profiles
- Stroke length is adjustable by adding extra weights
- When grizzly separation is over 130 mm, the grizzly bars and side plate will be higher than std.

\* Without drive unit, see table below for the drive unit.

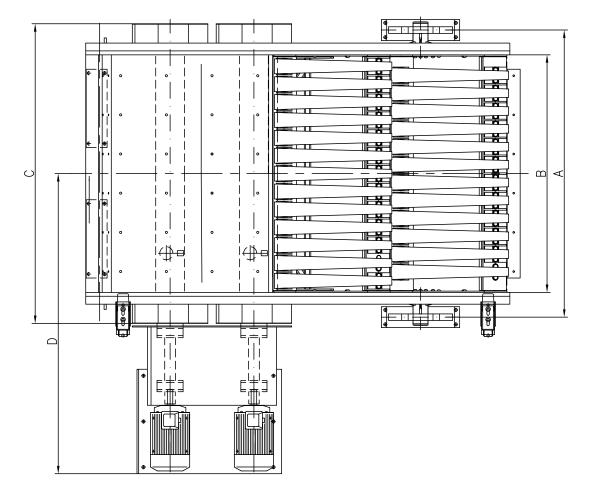

This information is meant to give a general guideline for our standard sizes. Some variations may exist due to options.

Screen is shipped on its own transport supports, vibrating mechanism is bolted to the screen frame. In all deliveries: motors, motor bases, cardan shaft parts, covers, support springs, lower spring pedestals and extra counter weights are packed in a separate box, which is tied on top of the screen deck when possible. When export packing is required (wooden crate etc.).

# SG-H GRIZZLY SCREENS

### FRAME INCLUDES INCLUDES

- Bolted screen body
- Side plates with top and bottom flanges
- Top deck is fitted with two integral grizzly sections, featuring diverging gap between the bars
- The grizzly is made of AR steel, one piece for each grizzly section and bolts to the crossbeams
- Bottom deck designed for side-tensioned media. C-type clamps are used for bottom deck
- Bolted AR liners to protect the sidewalls at the top and bottom decks
- Discharge plate at the bottom deck (i.e. equipped with 10 mm thick AR steel plate)
- Surface treatment according to Sandvik standard, components according to supplier's std painting.
- Installation, operating and maintenance manuals

### CIRCULAR MOTION MECHANISM INCLUDES

- Eccentric shaft with spherical roller bearings
- Unbalanced flywheels with external counterweights (i.e. facilitates stroke adjustments)
- The mechanism tube is protected by rubber liner

#### DRIVE TRANSMISSION INCLUDES

- Motor pulley, V-belts, sheave and pivoting motor base
- Transmission guard
- Flywheel guard (i.e. the flywheel is positioned at the opposite side of the transmission)

#### SUSPENSION INCLUDES

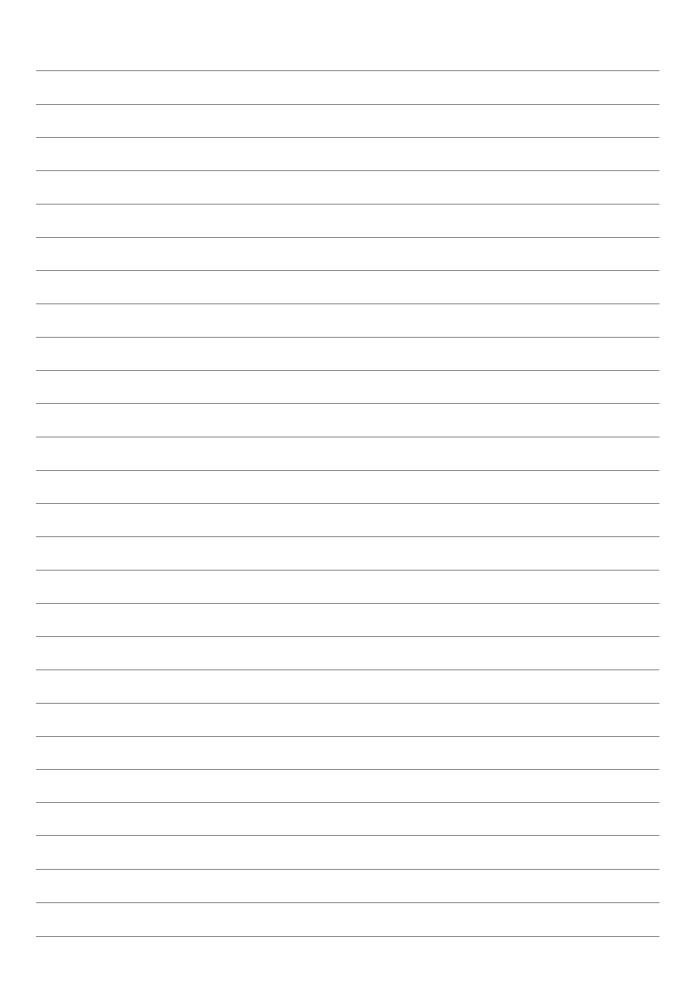

- Support brackets
- Coil springs
- Base mountings equipped with friction brakes

#### **OPTIONS**

- Perforated steel plates or self-supporting rubber panels (i.e. bottom deck)
- Preparation (in the factory before dispatch) for a long period storage
